The *Index to Chiropractic Literature* (ICL) is your gateway to the literature published in selected chiropractic journals. Founded in 1979 by the Chiropractic Library Consortium (CLIBCON), ICL is an essential tool for chiropractic educators, students, researchers and clinicians, and for the general public. The online version provides indexing from 1985 to the present for most journals. See also [About ICL](#).

## Search Tips

**Tip # 1: Search Boxes**  
From the pull-down menus beside the search boxes, select the default ALL FIELDS, or restrict terms or phrases to AUTHOR, SUBJECT KEYWORD or WORD or phrase in the ARTICLE TITLE or NOTES fields.

**Tip # 2: Boolean Operators**  
Select AND, OR, or NOT from the pull-down menus to combine terms in the search boxes.

**Tip # 3: Phrases**  
Use quotation marks to retrieve phrases in any field.  
Example: "low back pain", "future of chiropractic"

**Tip # 4: Authors**  
Choose names from SELECT AUTHOR, the online author index, or enter author last name in the pull-down AUTHOR field.

**Tip # 5: Subjects**  
Choose terms from SELECT SUBJECT HEADING, the online subject index, or enter a subject word or phrase in the pull-down SUBJECT KEYWORD field. A word or phrase entered in the SUBJECT KEYWORD field retrieves all SUBJECT HEADINGS containing that word or phrase.

**Publication Type** Review

**Abstract/Notes** OBJECTIVES: Myofascial pain syndrome (MPS) and myofascial trigger points (MTrPs) are important aspects of musculoskeletal medicine, including chiropractic. The purpose of this study was to review the most commonly used treatment procedures in chiropractic for MPS and MTrPs.

METHODS: The Scientific Commission of the Council on Chiropractic Guidelines and Practice Parameters (COGPP) was charged with developing literature syntheses, organized by anatomical region, to evaluate and report on the evidence base for chiropractic care. This article is the outcome of this charge. As part of the COGPP process, preliminary drafts of these articles were posted on the COGPP Web site [www.cogpp.org](http://www.cogpp.org) (2006-8) to allow for an open process and the broadest possible mechanism for stakeholder input. PubMed, Excerpta Medica Database, Cumulative Index to Nursing and Allied Health Literature, and databases for systematic reviews and clinical guidelines were searched. Separate searches were conducted for (1) manual palpation and algometry, (2) chiropractic and other manual therapies, and (3) other conservative and complementary/alternative therapies. Studies were screened for relevance and rated using the Oxford Scale and Scottish Intercollegiate Guidelines Network rating system.

RESULTS: A total of 112 articles were identified. Review of these articles resulted in the following recommendations regarding treatment: Moderately strong evidence supports manipulation and ischemic pressure for immediate pain relief at MTrPs, but only limited evidence exists for long-term pain relief at MTrPs. Evidence supports laser therapy (strong), transcutaneous electrical nerve stimulation, acupuncture, and magnet therapy (all moderate) for MTrPs and MPS, although the duration of relief varies among therapies. Limited evidence supports electrical muscle stimulation, high-voltage galvanic stimulation, interferential current, and frequency modulated neural stimulation in the treatment of MTrPs and MPS. Evidence is weak for ultrasound therapy.

CONCLUSIONS: Manual-type therapies and some physiologic therapeutic modalities have acceptable evidentiary support in the treatment of MPS and TrPs.

## A 2009 Record

## ICL Features

- Peer-reviewed chiropractic journals in one location
- Controlled vocabulary
- Ability to search by titles/authors/subjects/abstract words/years
- Ability to build search histories
- Ability to download or e-mail results
- Web links in individual records (many links to full text)
- Complete journal information for ICL journals
- Directory of Peer-Reviewed Journals in Chiropractic
- Further links to high quality resources in health/medicine/chiropractic

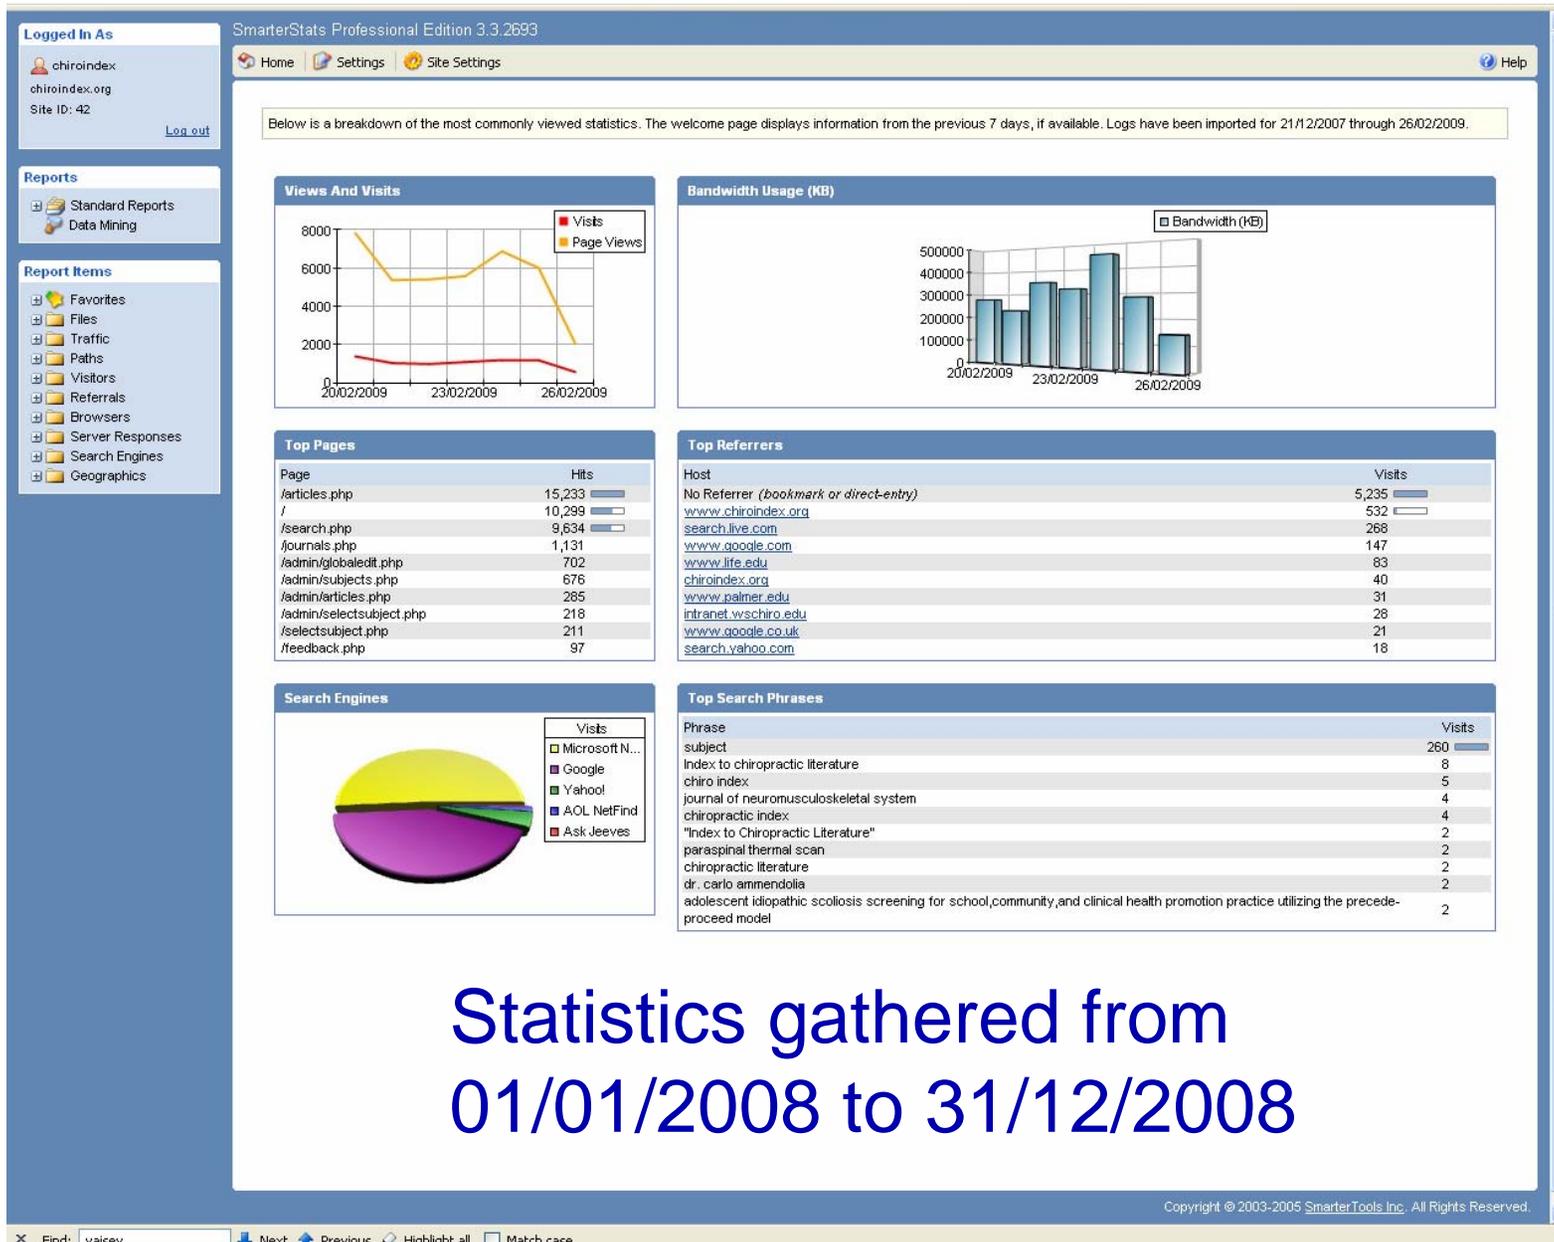

**No login, registration or payment required!**

A value of "No Referrer" represents a visitor typing your Web site directly into the browser, using a bookmark, or following a link from an email client.

Any time a visitor comes to your site, chances are they came from somewhere else.

The site that they come from, therefore, is called the "referring site".

## Some Observations re ICL Usage in 2008

- Geographical origins were diverse (128 countries)
- Traffic appeared to be heavy
- The most frequent Internet origins were search engines and chiropractic colleges
- The most frequent entry points were the actual bibliographical records (Why?)
- Users searched a wide variety of topics
